She's got (21) _____ brown hair.

I like (22) _____ colours – I hate black and grey.

He's got a (23) _____ face.

PART III. READING

Time: 10 minutes

7 points

Task 1. Read the text. Are these statements true (T) or false (F)?

Is There Anybody Out There?

We have seen them in films, we have read about them in books and we have heard about them in the news. But do those green creatures with big heads really exist? The astronomer, Ros Watts, has just written a new book called *Is there anybody out there?* Here, Carl Jackson interviews her.

CJ: Professor Watts, you go to a lot of international conferences on astronomy. Where have you been this month?

RW: Well, I have just come back from Puerto Rico. We have just had a meeting there to discuss radio signals from space.

CJ: Have we ever received signals from outer space?

RW: No, we haven't. But scientists have begun a programme to look for them. They are using radio telescopes.

CJ: And have scientists sent messages into space?

RW: Yes, we have. In fact, we have just sent a new message. We've used mathematics to try to communicate with aliens. But we haven't had a reply!

CJ: And what about space exploration? What have scientists found? Have you ever seen signs of life?

RW: We haven't discovered 'life' but we've seen conditions for it. A spaceship has just taken new pictures of Mars. They show that there was water on the planet once. And, we have just made a very interesting discovery – there is ice at the poles of the Moon!

CJ: Wow, that's interesting. One last question, Professor Watts. Have you ever seen an alien or a UFO?

RW: No, I've never seen one! But that doesn't mean they don't exist!

1. Professor Watts travels a lot on business.
2. Scientists have received messages from space.
3. Astronomers use English in messages to space.
4. Scientists have discovered life on Mars.
5. There is water on Mars.
6. There is ice on the Moon.
7. Professor Watts thinks there are no aliens.
