Imagine that you are preparing a project with your friend. You have found some interesting material for the presentation and you want to read this text to your friend. You have 2 minutes to read the text silently, then be ready to read it out aloud. You will not have more than 2 minutes to read it.

We do not like having to go to hospitals, but sometimes we have to. We are afraid of medical tests and examinations because we do not know what doctors know. For example, if you have ever had a part of your body X-rayed, you have seen those black-and-white prints. You look at them and you understand nothing. Only a specialist can understand if there is something wrong there. However, the situation may soon change. Modern scientists have announced the invention of a new X-ray machine. It can produce 3D colour pictures. They look very realistic and can give you an idea of what is going on inside a human body. The images are highly detailed and super accurate. They will certainly make the job of doctors much easier as it will not be hard to see where the problem is. This is a true revolution in the medical world.

You will have to start speaking in 2 minutes and will speak for not more than 2 minutes (12–15 sentences). In your talk remember to speak about:

- where and when the photo was taken
- what/who is in the photo
- what is happening
- why you keep the photo in your album
- why you decided to show the picture to your friend

You have to talk continuously, starting with:

“I’ve chosen photo number... ”
